

## 1.5.20 Circle Challenge

This one will keep me (Mrs Rolfe) and Mrs Halley happy!

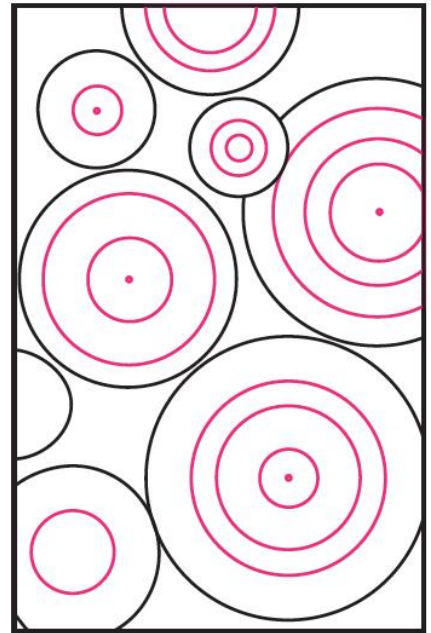

An art challenge with some mathematical links!

Robert Delaunay, an abstract artist from the early 1900's made some wonderful paintings known for their rhythm and colour.

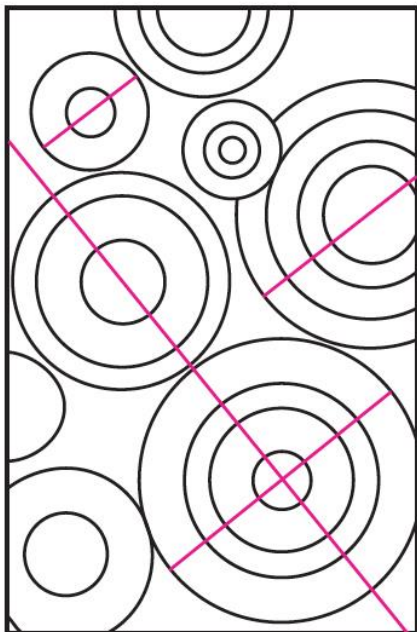

This challenge uses his style of creating many concentric circles and splitting just a few in half (maths bit!). It leaves the page with a pattern (maths bit!) of circles and half circles, which you can colour and highlight with your choices of colours. You can use paint, crayons, pens. Look online for more of his work and some inspiration. Enjoy!

1. Fill the page with circles of all sizes.

2. Draw concentric circles inside each.

3. Split some circles in half with a ruler.

4. Trace and color or paint.
